

Business Requirement Document (BRD)

Project: Customer Ticket Analytics Dashboard

1. Overview

The Customer Ticket Analytics Dashboard tracks SLA performance, ticket resolution efficiency, and customer satisfaction (CSAT) to support data-driven decision making in customer support. The solution integrates data cleaning, analysis, and interactive visualization using Excel, SQL, and Tableau.

2. Objectives

- Monitor SLA compliance by team and channel.
 - Improve ticket resolution efficiency.
 - Track CSAT trends (Positive / Neutral / Negative).
 - Identify operational bottlenecks.
 - Enable real-time performance monitoring.
-

3. Stakeholders

Stakeholder	Role
Customer Support Manager	Monitor team performance.
Operations Team	Improve efficiency and processes.
Business Analysts	Analyze trends and root causes.
Leadership	Make strategic decisions.

4. Scope (High-Level)

In Scope

- SLA performance tracking and weekly trends.
- Ticket analysis by Status, Group, and Channel.
- CSAT distribution and KPI dashboard.
- Interactive filters (Week, Group, Channel).

Out of Scope

- Real-time data streaming.
 - Integration with live ticketing systems.
 - Automated ticket assignment.
-

5. Data & Process Flow

Data Source

- Synthetic ticket dataset containing:
 - TicketID, CreatedDate, WeekNumber
 - Status, Group, Channel
 - CSAT_Score, ResolutionTimeHrs, SLA_Met

Process Flow (High-Level)

- Data Source → Excel (cleaning & transformation) → SQL (aggregations & root-cause analysis) → Tableau (interactive dashboard).
-

6. Key Functional Requirements

- SLA Monitoring:
 - Calculate and display SLA % overall and by week.
 - Ticket Analysis:
 - Show ticket distribution by Status, Group, and Channel.
 - Customer Satisfaction:
 - Display CSAT distribution (Positive, Neutral, Negative).
 - KPI Dashboard:
 - Show SLA %, Average CSAT Score, Average Resolution Time, and Ticket Volume.
 - Filtering:
 - Enable filters for Week, Group, and Channel.
 - Trend Analysis:
 - Display SLA trends over time.
-

7. Non-Functional Requirements & KPIs

Non-Functional Requirements

- Performance: Dashboard should load in 2–3 seconds.
- Usability: Clear, easy-to-understand visuals with minimal clutter.
- Scalability: Should handle increasing ticket volume.
- Reliability: Data should be accurate and consistent.

Key KPIs

- SLA %: Percentage of tickets meeting SLA.
 - CSAT Score: Average customer rating.
 - Resolution Time: Average time to resolve tickets.
 - Ticket Volume: Total number of tickets.
-

8. Risks, Limitations & Success Criteria

Risks & Limitations

- Synthetic dataset (limited real-world variability).
- Limited historical data.
- No real-time updates.

Success Criteria

- Dashboard provides clear, actionable insights.
 - Stakeholders can quickly identify issues and bottlenecks.
 - Overall decision-making capability for support teams improves.
-

9. Deliverables

- Clean dataset (Excel).
- SQL queries for analysis.
- Tableau dashboard (interactive).
- Documentation (BRD + Case Study).
